In this assignment, you will experiment with branches in a new GitHub repository. To begin, create a new repository named my-git-repo in your GitHub account. Next, login to a UNIX machine, such as kosh.nku.edu and clone the repository to that machine.

git clone URL

where you replace the URL with the URL from GitHub page of your new repository.

Begin working through Ry’s Git Tutorial, starting with section View the Repository Status of The Basics. Complete the following sections of the tutorial:

1. The Basics
2. Undoing Changes
3. Branches I
4. Branches II

Turn in your assignment in class as a hardcopy that answers the following questions:

1. What is the URL of your repository for this assignment?
2. What is the output of “git branch” at the end of the last completed tutorial section?
3. What is the output of “ls -lR” at the end of the last completed tutorial section?
4. What is the output of “git log --oneline” at the end of the last completed tutorial section?
